

Wizdom Mobile app

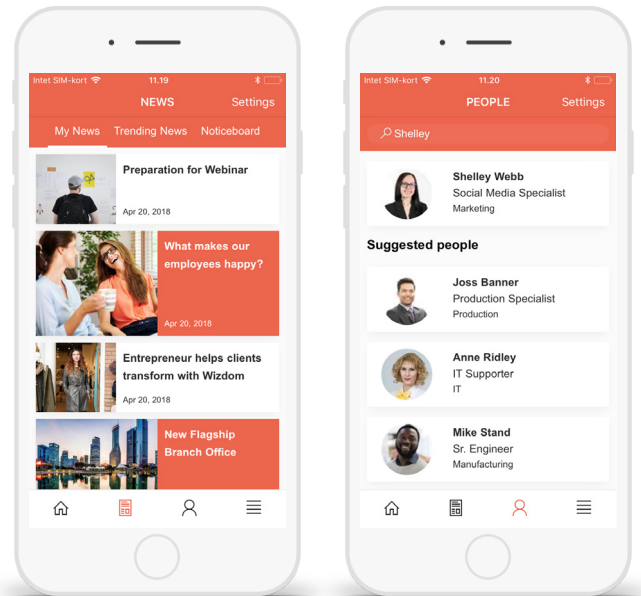

Manage your mobile experience

With the everchanging need to be mobile and access important company information and workflows away from the office, the Wizdom mobile app delivers powerful and customizable intranet features and flexibility which support company digitalization strategies and true digital workplace mobility. Wizdom mobile app is IOS and Android compatible and works with SharePoint 2013, 2016 and Office 365.

Go further, broader and beyond

Extend your intranet beyond traditional desktop use and get truly mobile quickly and easily. With Wizdom's mobile app you get four of the most used intranet modules right out of the box.

Setup your Corporate news with social features, News overview, Notice boards with social features plus Phone book and get going.

More than Wizdom capabilities

Our mobile app also has its own link collections, menu and CMC system for mobile specific page creation. All manageable and controllable from the central backend module.

It even integrates directly with the Yammer App empowering the user to continue the conversation.

Let the app contribute to your workplace engagement, productivity and success by tailoring it to meet your specific needs and objectives.

Fast and branded experience

With our proprietary Lightning Pages your mobile experience feels fast and responsive and includes caching of user credentials, making the content available to the users without any hassle at all.

Add to that beautiful Parallax scrolling effects, large photos to draw in attention and the possibility to custom brand your app according to your design guidelines for increased branding consistency.
